

Do you have **the bug?**

GLASS

New perspectives

Against the light of the day outside, a flesh fly is anchored to the window by the pads on its feet.

Do you have **the bug** ?

In contrast the feet of the Solitary Bee are small, its footing on the glass, not so sure.

Do you have **the bug** ?

Like nearly all insects trapped inside against the window, this Ruby-tailed Wasp climbs, falls, climbs again to find a way to the light.

Like all insects trapped inside the conservatory, it gets a helping hand to freedom.

Do you have **the bug** ?

A Solitary Wasp. Always active, always moving, takes a breather for a second.

Ushered out through an open window above, it was back again an hour later.. and released again.

Do you have **the bug** ?

Leaving the conservatory light on at night, attracts some nighttime visitors to the garden, such as this Small Magpie moth. Its eyes like two car headlights.

Do you have **the bug** ?

Attracted by the house lights, a gorgeous White Ermine moth rests on the glass. Once the lights are out, it will resume its night time activities

Do you have **the bug** ?

The light can play funny tricks through the camera where glass is concerned. This Squash Bug is walking on thin air.

The hazy pattern through the glass is a curtain.
